### Service Interruptions:

- None reported.

### Remote/Community Isolations:

- None reported.

# WEATHER OF CONCERN

## Weather of Concern

- A weak, quick-hitting system will bring hit or miss showers to Northern California during the day Saturday with a few inches of snow possible down to 4000-5000 feet. A brief break in the weather is expected for New Year's Eve into early Sunday. Arctic air will arrive next week, which will push snow levels down into the foothills, possibly even into the higher elevations of the Sacramento Valley, on Monday and Tuesday.
- A colder and stronger storm system will bring another round of rain and snow showers to Southern California on Saturday, New Years Eve. This storm will support snow showers across mountain roads and passes, likely including the Interstate 5 corridor near the Grapevine. 1-2 inches of snow are expected at mountain pass level, between 3500 to 4500 feet, Saturday afternoon and night. Snowfall in the mountains will range from 6-10 inches in the L.A. Mountains, with local accumulations up to 12 inches on the higher peaks, 3-6 inches in the Ventura Mountains and 2-4 inches in the Santa Barbara County Mountains above 6,000 feet.

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

The recent weather pattern of dry and warm afternoons and cold mornings will shift to one with gusty winds, mostly cloudy skies and light precipitation in a fairly cold air mass. This weather pattern will continue through Tuesday night as a series of cold low pressure systems drop in from the north. The first low will spread light showers into northern areas tonight and western areas on Saturday. Snow levels will be around 2500-3500 feet and precipitation totals will be half an inch or less. High pressure will move in Saturday as the low continues to move out of the region, and there will be some areas of gusty north to northeast winds develop tonight that last into Saturday as a result. A much colder, somewhat stronger system will produce light snow in the northern mountains beginning early on New Years Day. Light precipitation will spread south throughout the day and continue in most areas through Tuesday, ending first in northwestern areas and finally ending in southeastern areas early Wednesday. Snow levels will start out near 2000-3500 feet early Sunday and drop to 500-2500 feet on Monday. Most areas will receive less than an inch of water equivalent, but some areas of the Northern Sierra may see up to 2 inches. Cold air will linger over the region from Wednesday through the end of next week with clearing skies. Overnight lows may drop to the mid 20s in the Sacramento Valley to just below zero in the higher mountain valleys beginning next Wednesday.

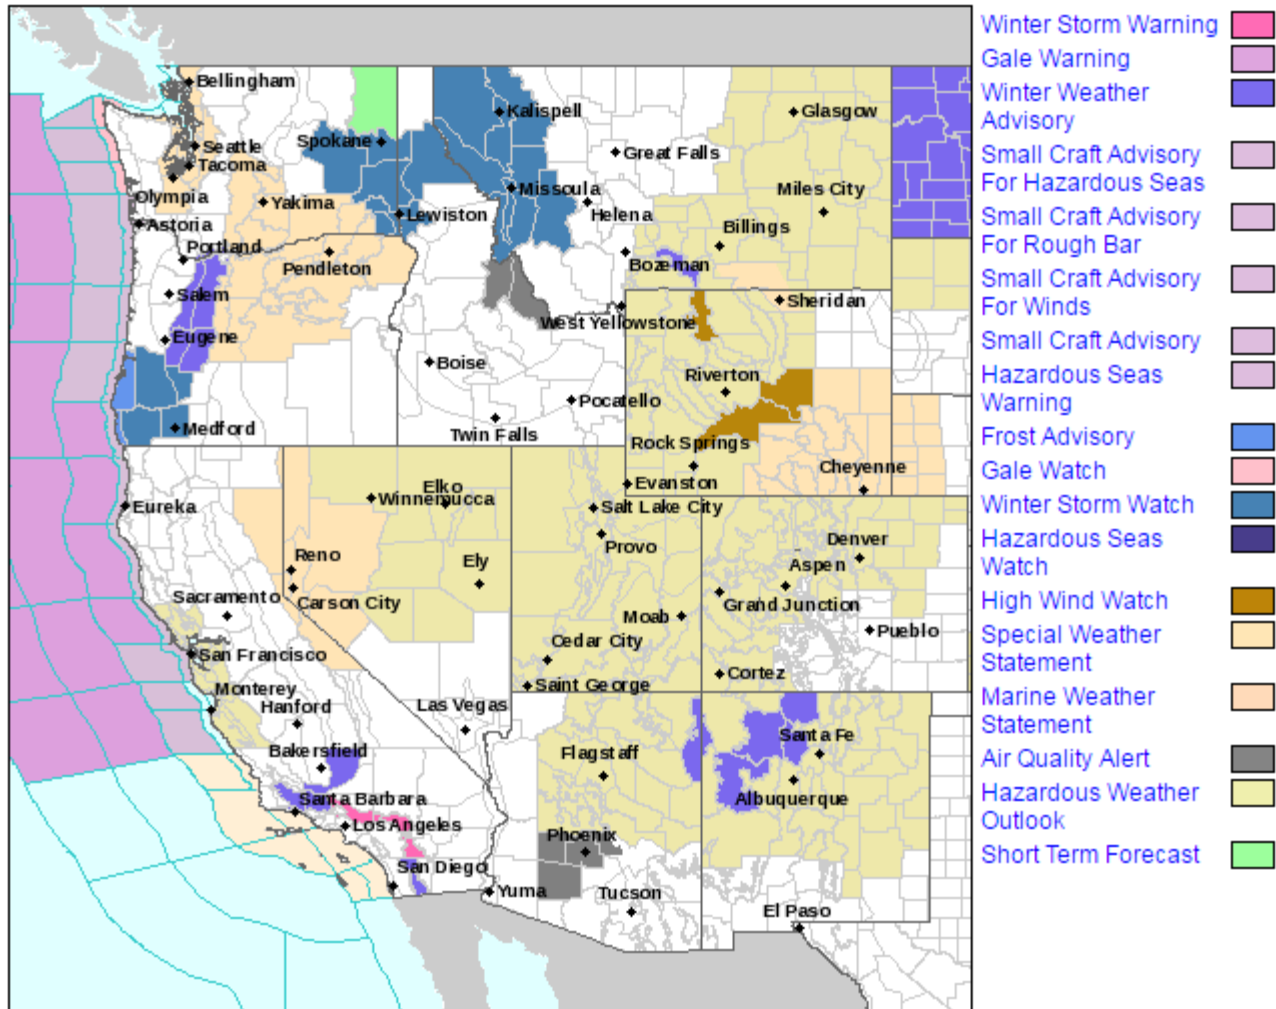

## **SOUTHERN CALIFORNIA**

An area of low pressure moving inland near Point Conception from the southwest will bring showers to the region through this evening, with most locations getting between a quarter inch and an inch of rainfall. The snow level will be around 8,000 feet. Maximum temperatures will be near normal today, with 40s to low 50s across the mountains and mid 50s to mid 60s in the valleys. Another area of low pressure dropping south along the West Coast will bring additional showers to the region Saturday. Most of Southern California will receive between 0.50 and 1.50 inches of rainfall, while most of Central California receives between a quarter inch and a half inch of rainfall. The snow level will drop to around 4,000 feet Saturday. South to west winds of 15 to 25 mph with gusts to 40 mph will surface across the mountain ridges and desert passes Saturday. Maximum temperatures will drop to around 10 degrees below normal Saturday, with mid 30s to mid 40s across the mountains and upper 40s and 50s in the valleys. A Pacific trough will maintain well below normal temperatures and periods of showers across the region Sunday through the end of next week. Westerly winds of 20 to 40 mph with gusts to 60 mph will surface across the wind prone mountain and desert areas at times Sunday through the end of next week.
